

PROFILE

Recent SCU Class of 2023 Graduate. I developed a virtual living garden with the java programming language with two of my classmates. We implemented plants, animals, and weather elements to make our project as realistic as possible. Our garden was operating on a thirty-day (one month) timetable of life.

For my senior capstone management analysis project, I had to recommend improvements to Electronic Arts' business model. I proposed a long-term solution of partnering with Meta Platforms' Oculus division to progress virtual reality gaming for consumers. EA has established products; Oculus has a younger consumer foundation.
