PROFESSIONAL SUMMARY

Programmer with diverse experience in designing, developing, testing, debugging, and providing technical support to java/J2EE applications in web and client-server environments during all phases of software development life cycle.

- Having **1.4** years of experience in development of web-based application in back-end and front-end technologies.
- Working on a Vendor Onboarding process and application using NEWGEN iBPS product and development projects.
- Involved in PROD-support, debugging testing of critical issues, real time fixes, and validations .
- Responsible to **test** and **deploy** the developed solutions for demos.
- Hands-on experience on executing the projects using **Agile** methodologies.
- Good in troubleshooting of complex application problems.
- Good Communication and interpersonal skills.
- I have completed "CORPORATE TRAINING in java/J2EE technologies" at Techno Soft Institute.

TECHNICAL SKILLS

Languages	:	Java, JavaScript,HTML,CSS
Database	:	MS-SQL
Servers	:	JBoss server, Tomcat
IDE	:	NetBeans, Eclipse
Newgen Products	:	iBPS, Omnidocs, BRMS
Operating System	:	MS-DOS, Windows 10.x
Other Tools	:	MVC, API's, SVN
Frame Works	:	Spring, SpringBoot MVC

PROFESSIONAL EXPERIENCE

Worked as a Software Engineer in **Newgen Software** Technologies from Feb 2022 – May 2023.

EDUCATION

Studied **B.Tech** from Universal College of Engineering and Technology**(JNTU Kakinada)**

WORK EXPERIENCE

Project #1

Title	:	**Vendor Onboadring Process**

Domain	:	Application
Role	:	Developer
Team Size	:	6
Environment	:	JAVA1.8, JavaScript, MS-SQL, JBoss server, iBPS Product, Product API's, Spring, SpringBoot MVC

Description:

Vendor Onboarding is the process of gathering the information needed for the buyer's organization in-order to accept as an approve vendor to do business. Also provide maintenance & administration services of the vendors. Notification or Alert can be sent on licenses. Permits or any other documents by tracking the vendor information.

iBPS Product:

This application is used to define processes which include workflows and forms. We can attach forms to the work items and according to the user access. The process flows through the application. We use JavaScript for the validation of the workflow.

Responsibilities:

- Development, Implementation application using iBPS product.
- Analysing the bugs and identifying and fixed its root cause in the application.
- Deployed a vendor onboarding process using iBPS product in all stages from gathering requirements to developing the product on client environment .
- Executing the test cases for accelerator and release it .
- Deployed and tested NEWGEN process accelerators.
- Deploying the new change requests (CR's) by gathering requirements from COE team and delivery of the project within the specified deadline.
- Generating the cloud complains reports for accelerator (SCA, SonarQube, Accunetix).
